

# WELL HEALTH ASSESSMENTS

An irrigation system requires a productive water source. In many cases, that source comes in the form of a high-capacity well. Over time, buildup can occur and slow the water flow which decreases it's overall production. A **Well Health Assessment** can assess the current state of your well(s).

## INCLUDES MEASUREMENT OF:

- Static Water Level
- Pumping Flow Rate
- Pumping Water Level
- Discharge Pressure Level
- Amperage and Voltage
